Let's Start!

The stars are endless.

Learning Outcome

Understand detailed descriptions of real or imaginary events and experiences in present, past or future, in spoken interactions or written texts.

Can Do Statements

- I can talk about science and leisure time.
- I can report facts about events and actions.
- I can speculate about events or actions in the present.

Ask your partner:

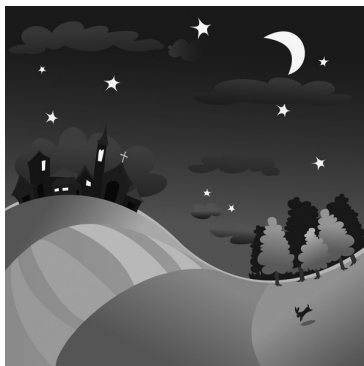

- What is astronomy?
- Which constellation do you know about? Did you know that Aries and Aquarius are the names of constellations?

Let's Explore!

Michelle and Vanessa get serious about constellations!

Instructions: Read the text aloud.

- Vanessa:** It shouldn't be long before we get to the top of the hill ... Wow! Look at all those stars!
- Michelle:** What did I tell you? Aren't they just sublime? Look at the constellation over there!
- Vanessa:** Wow, you must really know your stuff! I don't even know what a constellation is.
- Michelle:** Well all credit goes to my friend whose sister taught me all this stuff. A constellation is a group of stars that form a recognizable pattern. I'll show you an example that can help you understand it better. You see that pattern over there? What do you think it is?
- Vanessa:** I'm not sure, but does that look like a bull?
- Michelle:** Yes, that constellation has the pattern of a bull. That will be the constellation, Taurus.
- Vanessa:** Wow! That is amazing. How many constellations are there, Michelle? There should be at least a hundred of them out there.
- Michelle:** According to an astronomy book that I read a few weeks ago, there are around 88 constellations in the sky. Oh look there's another one! Can you guess the one that I'm pointing to?
- Vanessa:** That should be a scorpion.
- Michelle:** Yes, that's the constellation "Scorpio". There are others like the constellation "Pisces" whose formation looks like two fishes going in two different directions. It will be somewhere over that way.
- Vanessa:** It won't be that one ... Oh wait, I see it. Here's another one that looks like a ladle with a long handle.
- Michelle:** Oh. That will be the "Ursa Minor", the little bear, which is commonly referred to as the "Little Dipper".
- Vanessa:** This is fun, Michelle. We should do this more often.
- Michelle:** Yes, we definitely should! It can be cloudy this time of year though.

Let's Practice!

Vanessa is learning a lot about stars and constellations.

Instructions: Write the correct words from the options to complete the sentences. Read the sentences aloud. Check your pronunciation with your instructor.

- All credit goes to my friend _____ me everything I know about astronomy.
a) who teach sister b) which sister taught c) whose sister taught
- I'll show you an example _____ help you understand better what a constellation is.
a) that can b) who can c) whom can
- According to an astronomy book _____ a few weeks ago, there are 88 constellations in the sky.
a) that i read b) who i have read c) that i have read
- There are others, like the constellation "Pisces", _____ like two fishes going in two different directions.
a) who formation looks b) whose formation looks c) that it look
- That must be the "Ursa Minor", _____ the "Little Dipper".
a) which is commonly referred like b) which is commonly referred to as
c) who is commonly referred like

Let's Practice!

Michelle loves stars!

Instructions: Write the correct words from the Word Bank to complete the sentence.

Word Bank

sublime / pattern / astronomy / constellations / scorpions

- According to an _____ book that I read a few weeks ago, there are around 88 constellations in the sky.
- A constellation is a group of stars that forms a recognizable _____.
- What did I tell you? Isn't the sky just _____ with all the thrilling things it has to offer us?
- That constellation definitely has the pattern of a _____.
- Look at all those _____ and stars that are twinkling!

Extension Activity

Find out about a constellation.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Go online or to your local library and find information about the constellations in the dialogue (Scorpio, Pisces or Ursa Minor).
- Find how many stars it consists of and its configuration.
- Find about the symbol it represents.
- Write notes about it and then write a summary.
- Tell a partner about your findings.

Self-Assessment

Yes

No

I research about science.

☐
☐

I tell someone about my research.

☐
☐

I write a summary of the information.

☐
☐

Target Words

- sublime** (adjective): supreme and outstanding
e.g. Aren't the stars just sublime! Look at the constellation over there!
- constellation** (noun): a group of stars that form the shape of an animal or object
e.g. That constellation makes the shape of the hunter Orion.
- scorpion** (noun): an arachnid with pincers and a poisonous tail
e.g. It looks like it might be a scorpion.
- pattern** (noun): a repeated form
e.g. A constellation is a group of stars that form a recognizable pattern.
- recognizable** (adjective): easy to identify based on previous knowledge, appearance or characteristics
e.g. A constellation is a group of stars that form a recognizable pattern.

Learning Points

Defining Relative Clauses as Object

You can use *relative pronouns* in defining relative clauses to talk about objects as well. These pronouns say which noun you are referring to.

If you want to refer to people, you use the *relative pronouns* **whom** or **that**.

If you want to refer to things, you use the *relative pronouns* **which** or **that**.

You can also omit or leave out object *relative pronoun* clauses and the meaning of the sentence will be the same.

For example:

*My mother, **who** was born in Singapore, lived most of her life abroad.*

*I have just seen Titanic, **which** is one of the most romantic movies I have ever seen.*

Speaking Note: **Whom** is not usually used in speaking. It can sound too formal. Many people use **who** instead of **whom** even when they are referring to the object.

Another *relative pronoun* that you can use is **whose**. This is used to talk about possession and it can be used with both people and things.

*The woman **whose** husband is a doctor is sitting over there.* (the woman's husband)

*The island **whose** beaches have pink sand is popular with tourists.* (the island's beaches)

Examples:

- *Well all credit goes to my friend **whose** sister taught me all this stuff.*
- *There are others like the constellation "Pisces" **whose** formation looks like two fishes going in two different directions.*

Learning Points

Will, Won't, Should, Shouldn't, Can to Speculate about the Present

You can use other modal verbs like *should* and *shouldn't* to make guesses about situations in the present. You can use *can* to express a general possibility. *Will* and *won't* are used to express something you are certain about. Remember to use the simple form of the verb (the infinitive without "to") after these words.

When you are very sure, use **will** or **won't**. You are 100% certain.

*My grandmother lives in Brazil and because of the time difference, it is 11 o'clock at night there. She **will** be asleep now. She **won't** be awake.*

If all the conditions are met (if everything happens as you expect) and you assume that something is probably true, you use **should** or **shouldn't**.

*It is 10:30 a.m. on Saturday morning. My friend doesn't usually sleep in on the weekends. She **should** be up at this time.*

*I am on vacation from work and have a lot of free time. It **shouldn't** be a problem to find the time to run a few errands and do some housework.*

Should is more often used with positive events. If you want to talk about a negative event, it would be better to use **will**.

*Because today is Christmas Eve, the mall **will** be quite crowded.*

Can expresses a general possibility, a situation or event we know happens sometimes. *In Canada, the winter **can** get very cold.*

If you want to talk about a more specific possibility, use **could** instead.

*My brother **could** be at the library now, but I'm not sure because he said he might stay home tonight.*

Examples:

- *It **shouldn't** be long before we get to the top of the hill.*
- *That **will** be the constellation, Taurus.*
- *There **should** be at least a hundred of them out there.*
- *It **won't** be that one.*
- *It **can** be cloudy this time of year though.*
