Let's Start!

Would you like to explore space?

Learning Outcome

Understand detailed descriptions of real or imaginary events and experiences in present, past or future, in spoken interactions or written texts.

Ask your partner:

- Do you think space exploration is important?
- Would you pay to travel into space? Why? Why not?

Can Do Statements

- I can talk about science and leisure time.
- I can express true, untrue and possible events in present.
- I can express complex statements using words like *whose*, *that* or *which*.

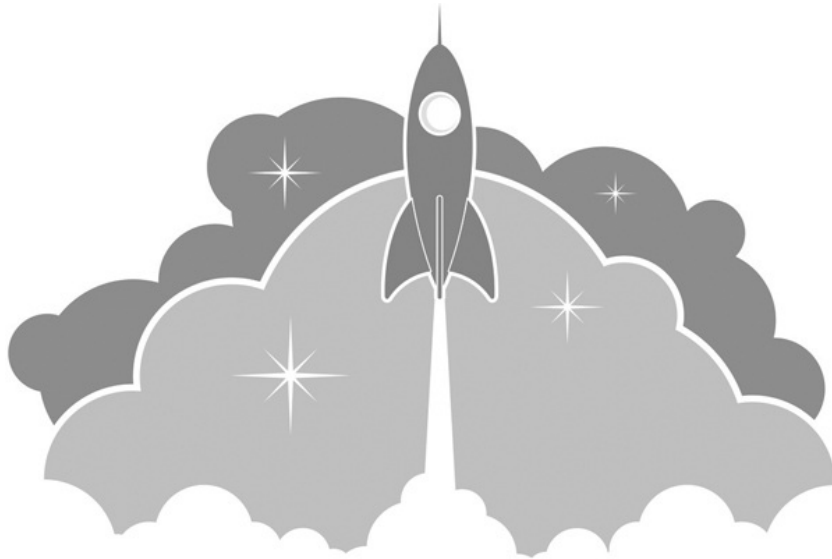

Let's Explore!

Let's get **up to speed*** on space exploration!

* To be "up to speed" means to know the most current information.

Instructions: Read the text aloud.

Exploring space shouldn't be a dream that is "out of this world". Ever since the advent of rockets, space exploration has taken new dimensions. Man is on a mission to discover the millions of galaxies and planets, of which the world beyond ours is comprised. While the study of space is carried out by astronomers, the actual physical exploration is conducted by both unmanned robotic probes and human spaceflight. The advancement of rocket technology, whose development occurred in the early 20th century, propelled space exploration to new heights.

The subject of space exploration has been picking up speed over the past few years. One reason could be that many people are concerned about our own survival as a species. With all the wars, famine, and pollution, it is likely life on Earth won't survive. So, to preserve human existence, scientists have developed theories of how humans can live on a different planet. It's a tall order that requires ongoing research and exploration. Many of the world's rich such as Elon Musk, who has invested billions of dollars into his own SpaceX company, strongly believe that we will discover a similar world outside ours that has the potential to save our species. SpaceX, which is one of the first privately owned companies, has been deeply involved in space exploration. They continue to find ways to reduce exploration and transportation costs in order to make the colonization of Mars a reality.

With the rapid rate of technological advancement in space exploration, it is possible that we will be packing our bags for Mars in the very near future.

Let's Practice!

What could be the future of the human race?

Instructions: Complete the sentences below by choosing from the options that you are given.

Word Bank

may / like / will / should / likely / could / can't / could / can

- One reason for looking for new planets _____ be that many people are concerned about our own survival as a species.
- With all the wars, famine, and pollution, it is _____ life on Earth won't survive.
- So, to preserve human existence, scientists have developed theories of how humans _____ live on a different planet.
- There _____ be a similar world outside ours that has the potential to save our species.
- It is possible that we _____ be packing our bags for Mars in the very near future.

Let's Practice!

Michelle talks about space exploration.

Instructions: Circle the correct option to complete the sentence. Read the sentences aloud. Check your pronunciation with your instructor.

- Ever since the _____ of rockets, space exploration has taken new dimensions.
a) advent **b)** arriving **c)** adventure
- Man is on a mission to discover the millions of galaxies and planets of which the world beyond ours is _____.
a) compromised **b)** comprised **c)** comprising
- The physical _____ of space is conducted by both unmanned robotic probes and human spaceflight.
a) exploration **b)** explored **c)** exploring
- The _____ of rocket technology, whose development occurred in the early 20th century, propelled space exploration to new heights.
a) advancement **b)** advance **c)** advancing
- _____ improvement in space exploration, it is possible that we could be packing our bags for Mars in the very near future.
a) technique **b)** technological **c)** With the rapid rate of technological

Extension Activity

Debate the reasons for space exploration.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Make a group of 4. Two of you will debate for (agree) and the other two against (disagree) space exploration.
- Two of you will research the pros of space exploration and two of you will research the cons.
- Take notes of facts to support your argument.
- In your arguments make sure you use some complex statements (*who, which, whose* etc.)
- Have an informal debate with the other two people. Make sure you take turns listening and speaking.

Self-Assessment

Yes

No

I research the pros/cons of space exploration.

☐ ☐

I write notes about exploration.

☐ ☐

I use complex statements.

☐ ☐

I present my arguments.

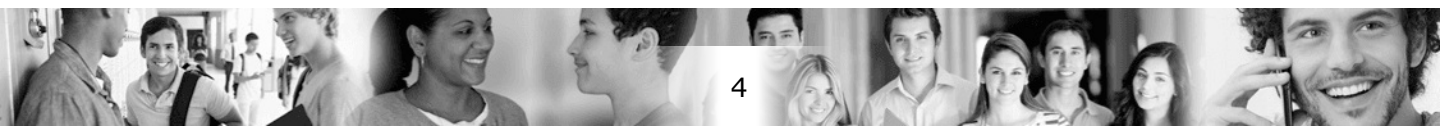

☐ ☐

I listen to the opposing team's arguments.

☐ ☐

Target Words

- exploration** (noun): the act of searching or discovering something new
e.g. Ever since the advent of rockets, space exploration has taken new dimensions.
- advancement** (noun): development or improvement something
Example: The advancement of rocket technology propelled space exploration to new heights.
- survival** (noun): continuation of living or existing
Example: Many people are concerned about our own survival as a species.
- technological** (adjective): related to the study and knowledge of the practical use of scientific discoveries
e.g. With the rapid rate of technological advancement in space exploration, it is possible that we could be packing our bags for Mars in the very near future.
- advent** (noun): the time when something first begins to be used
e.g. Ever since the advent of rockets, space exploration has taken new dimensions.
- probability** (noun): the level of possibility of something happening or being true
e.g. The probability of finding a planet suitable for life is actually quite high.
- to comprise** (verb): to be made up from, or consist of different parts
e.g. Man is on a mission to discover the millions of galaxies and planets, of which the world beyond ours is comprised.

Learning Points

Will, Won't, Should, Shouldn't, Can to Speculate about the Present

You can use modal verbs like *should*, *shouldn't* and *can* to speculate about a present situation.

Use **will or won't** when you are completely certain about something.

With all the wars, famine, and pollution, it is likely life on Earth won't survive.*

*Here the word *likely* means that the speaker feels that the event will certainly happen.

Use **should** or **shouldn't** when you assume that something is probably true because everything happens as expected.

In negative events, however, *will* is more commonly used.

*A plane ticket **will** cost more during peak season. (instead of "should cost more")*

Use **can** to talk about general possibilities. For a more specific situation, use **could**.

Compare the following sentences:

*Shopping online **can** put you at risk for identity theft.*

*My sister **could** be shopping right now because Christmas is next week.*

Examples:

- *Exploring space **shouldn't** be a dream that is "out of this world".*
- *One reason **could** be that many people are concerned about our own survival as a species.*
- *Elon Musk strongly believes that we **will** discover a similar world outside ours.*

Learning Points

Prepositions and Relative Clauses

You already use many different verbs in your sentences. However, some verbs are followed by prepositions.

If you want to make relative clauses with these verbs, there are certain rules you need to remember. Look at the structure of the sentences below.

The astronaut	with whom	I was speaking is from Russia.
The astronaut	who(m)	I was speaking with is from Russia.
The astronaut	that	I was speaking with is from Russia.
The astronaut		I was speaking with is from Russia.
The club	to which	I belong is celebrating their 50th anniversary.
The club	which	I belong to is celebrating their 50th anniversary.
The club	that	I belong to is celebrating their 50th anniversary.
The club		I belong to is celebrating their 50th anniversary.

Prepositions are used only *before* the object relative pronouns **whom** or **which**. They are never used before **who** or **that**.

If you put the preposition after the verb, then you can use **who**, **whom**, **which** or **that**. You can even omit the preposition and the sentence meaning will be the same.

Learning Points

Some other verb + preposition combinations:

divorce from

agree to

warn about

listen to

apply for

rely on

believe in

talk to

deal with

work with

WHOSE

You use **whose** in relative clauses to show possession. It cannot be left out of the relative clause.

*I know a woman **whose** son was in the army.*

*The house **whose** faucets are made of gold is for sale.*

Examples:

- *The advancement of rocket technology, **whose** development occurred in the early 20th century, propelled space exploration to new heights.*
- *Many of the world's rich such as Elon Musk, **whose** investments into his own SpaceX company has amounted to billions, strongly believes that we will discover a similar world outside ours that has the potential to save our species.*
